JAU

EASY, POWERFUL, DECISIVE

THE GOAL IS TO PREVENT ANY DEVICE WITHIN JAU FROM INTERCEPTING CONVERSATIONS BETWEEN PEOPLE IN THE ROOM WHERE A MEETING IS HELD.

CONFIDENTIALITY OF CONVERSATIONS IS ESSENTIAL

How much does the confidentiality of a meeting matter? What are the risks if the information transmitted verbally is intercepted or recorded?

Today, however, **the confidentiality of information is endangered** by the ease with which mobile devices (smartphones) can record video and audio, and be heard.
Not to mention any Trojans (computer viruses) that take over the device, without the owner being aware of it.

① ② ③ ④

IF THE RISK IS GREAT, THE SOLUTION MUST BE DEFINITIVE

The Sind solution consists of a box in which smartphones and tablets are deposited before reserved meetings.

It does not interrupt the functioning of mobile phones, but completely inhibits their use for any type of registration or listening.
The meeting and verbal communication can take place in complete safety.

At the end of the meeting, each participant will be able to read the messages received in the meantime on their device, **since the telephone operator's network is not interrupted**.

The box uses a powerful acoustic masking to prevent any possible recording. When the box is closed, a luminous LED on each of the four sides certifies that the "shield" is active and operating.

## BOX DIMENSIONS
External: 366 x 300 x 115 mm
Internal: 290 x 220 x 60 mm
Capacity: up to 12 devices
Power supply: 220 V/USB

AUTOMATIC RECHARGE
Some devices can be recharged, once the box is closed, using the RFID/wireless function, increasingly common in latest smartphones.

MADE IN ITALY

Designed and engineered by Sind, it comes with a pleasant design, in white or black, suitable to be placed on a meeting table, immediately employable and of proven efficacy, no instructions needed.

Functionalities have been tested and certified by an autonomous body and by specialized departments of the security forces of the national bodies.
